New type *B. napus*

$A^{r/n} A^{r/n} C^{c/n} C^{c/n}$

New type *B. napus*:

Traditional *B. napus*:

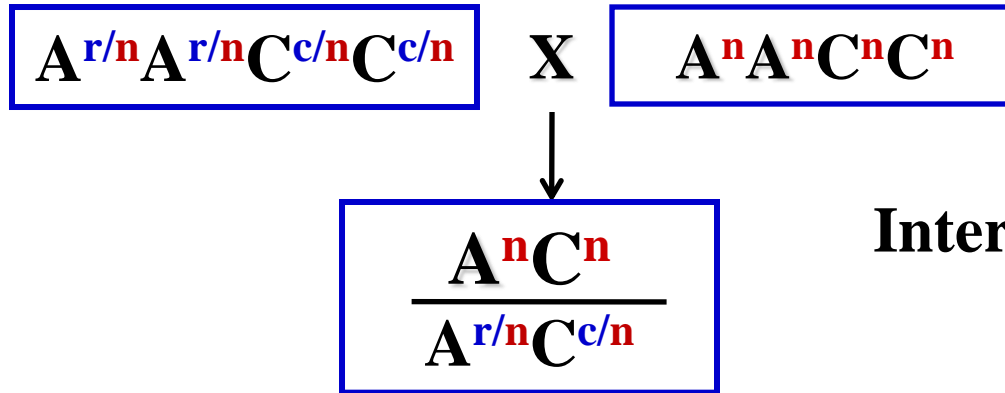

- Australia
- China
- Europe
- India

Other species:

Analysis on genetic diversity on *B. napus* accessions and other Brassica species

Partial new type *B. napus*

Intersubgenomic hybrids

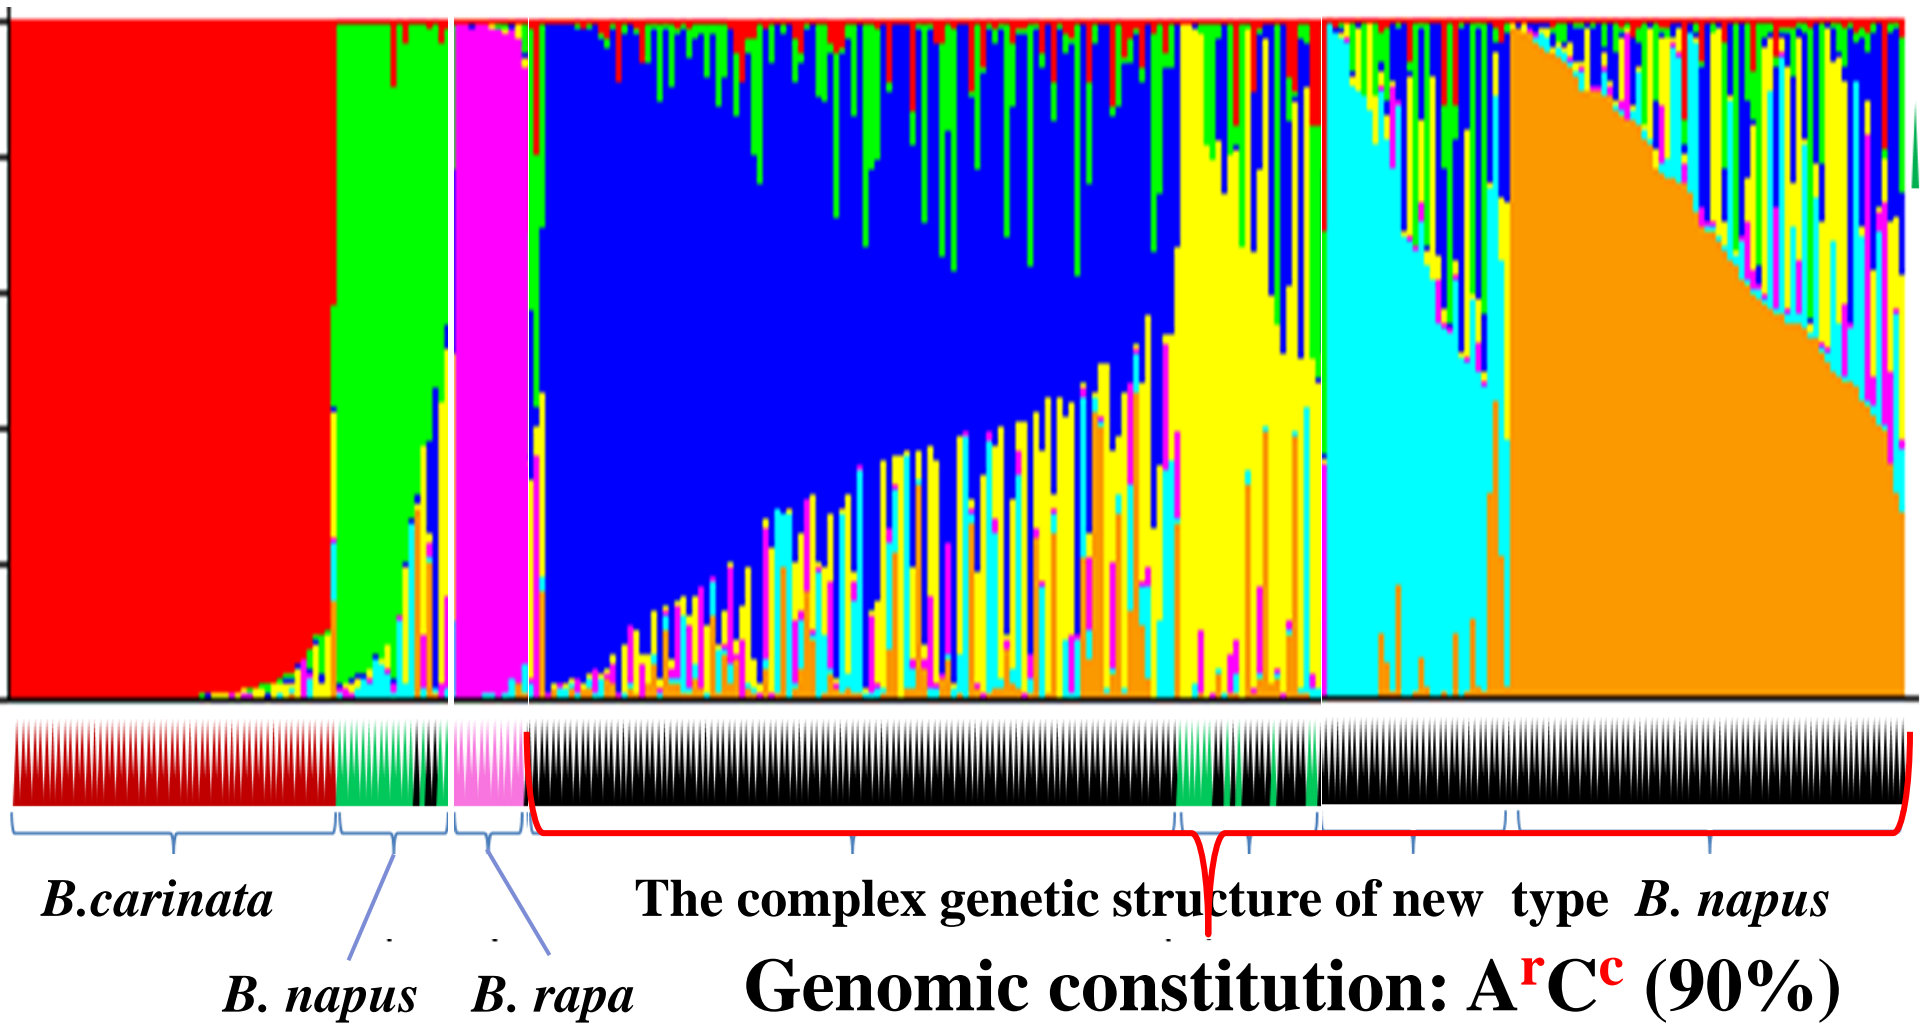

Heterosis overview on partial intersubgenomic hybrids in three ecotypic regions of rapeseed production

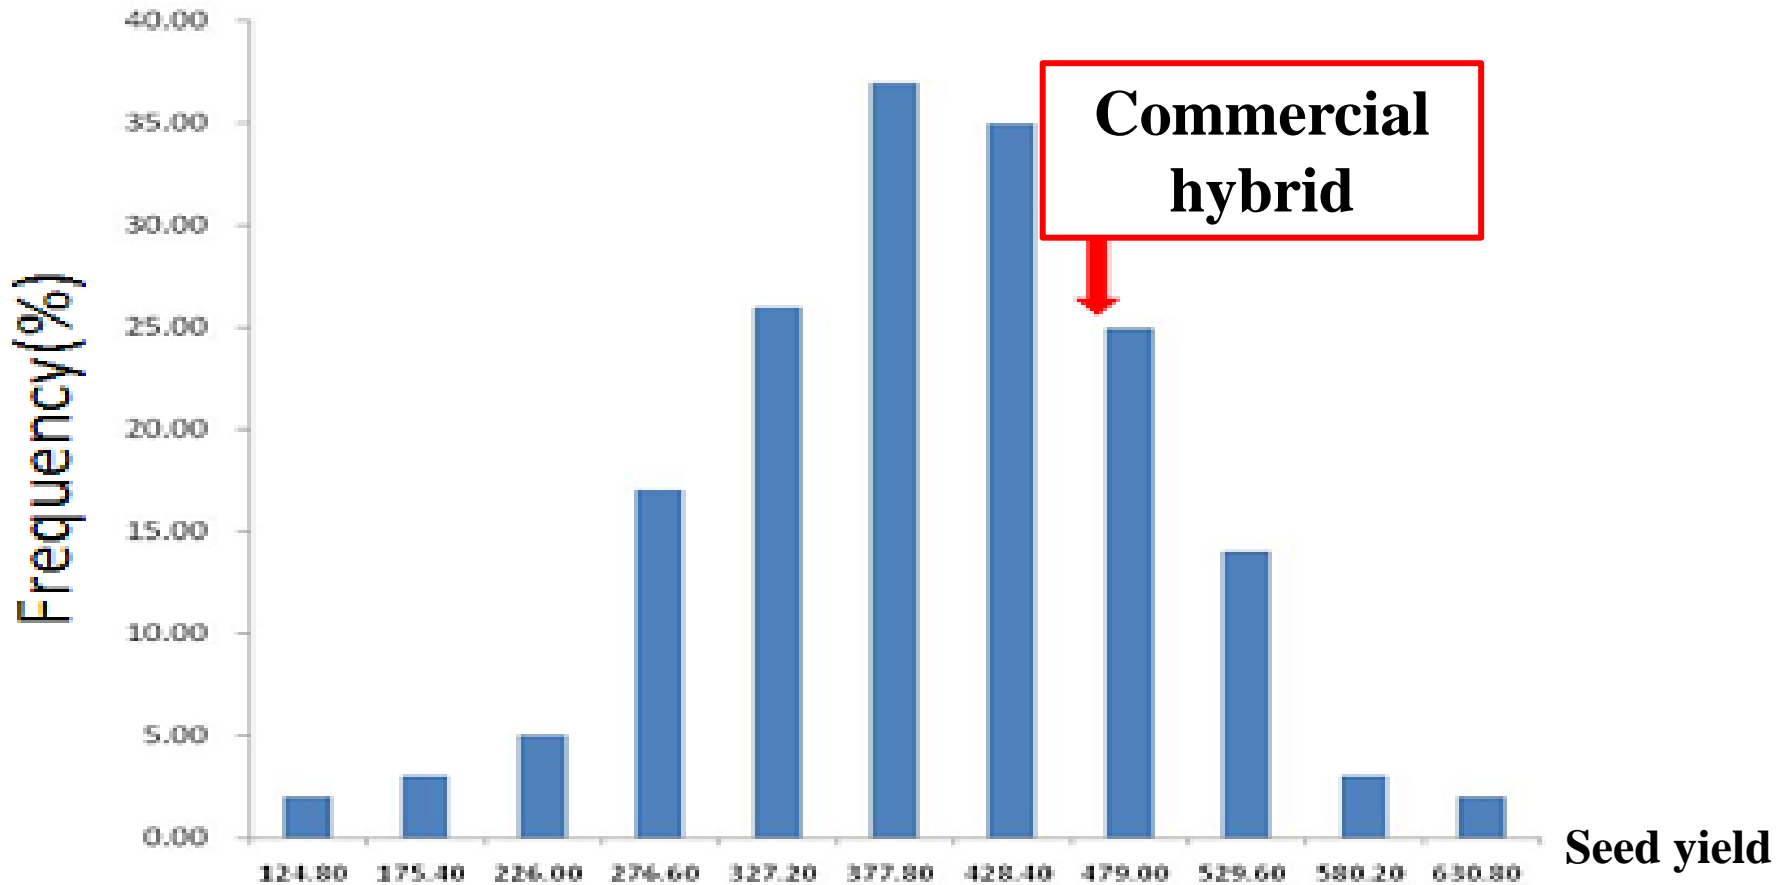

Construct a A^r/C^c genepool of new type *B. napus*

Genetic structure of the population is distinguished from traditional *B. napus* and its parental species

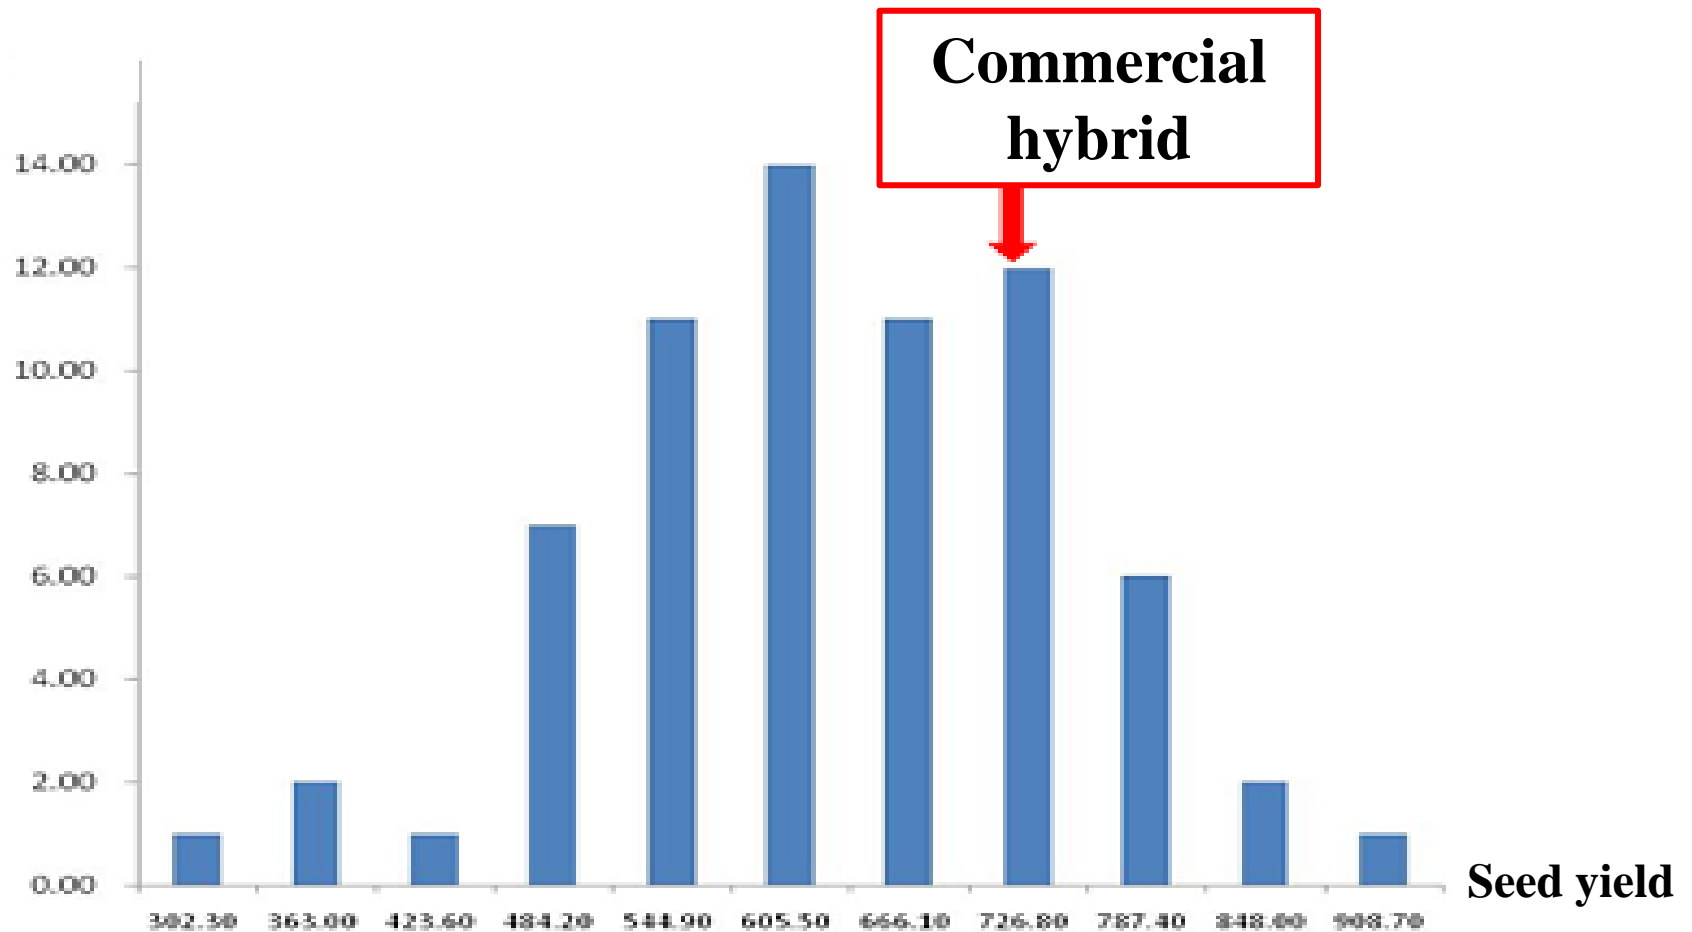

The heterosis potential of selected inbred lines of new type *B. napus* was evaluated with four testers

Grown in Wuhan, 2012

The heterosis potential of selected inbred lines of new type *B. napus* was evaluated with four testers

Grown in south-east of Wuhan, 2012

Construct a A^r/C^c genepool of new type *B. napus*

Founder parents:

78 cultivars

135 cultivars

B. carinata ($B^c B^c C^c C^c$)

×

B. rapa ($A^r A^r$)

Hexaploid
($A^r A^r B^c B^c C^c C^c$)

×

Selected lines
of new type
B. napus

A^r/C^c genepool of new type *B. napus*
~10,000 plants

Introduce
Dominant genic
male sterility

Inbred
lines

Recombined
heterozygote plants for
recurrent selection

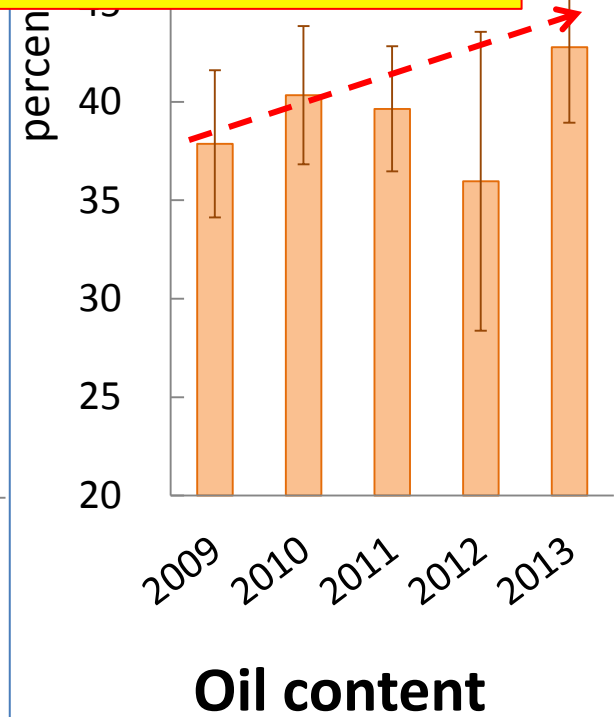

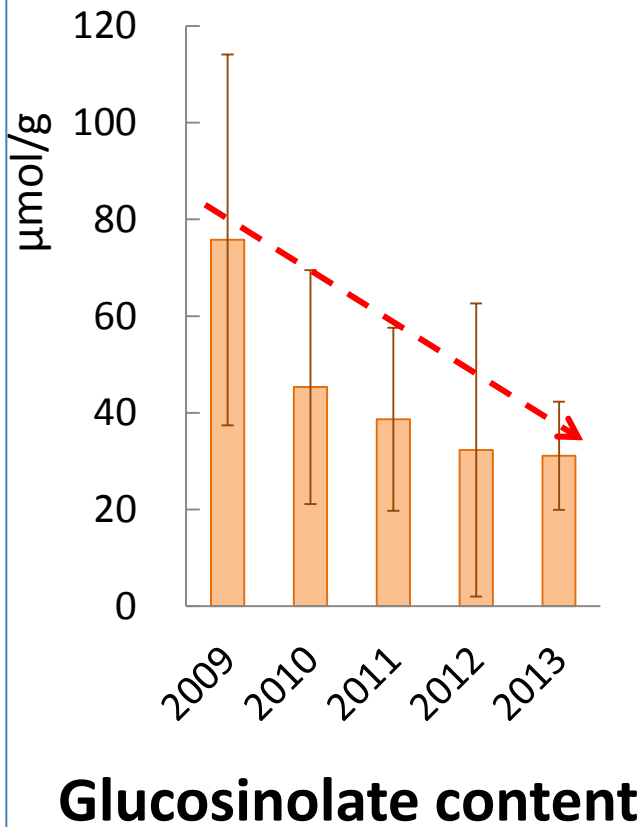

The recombined heterozygote plants have greater genetic variation than inbreds

Genetic similarity in lines of new type *B. napus* and their parental species

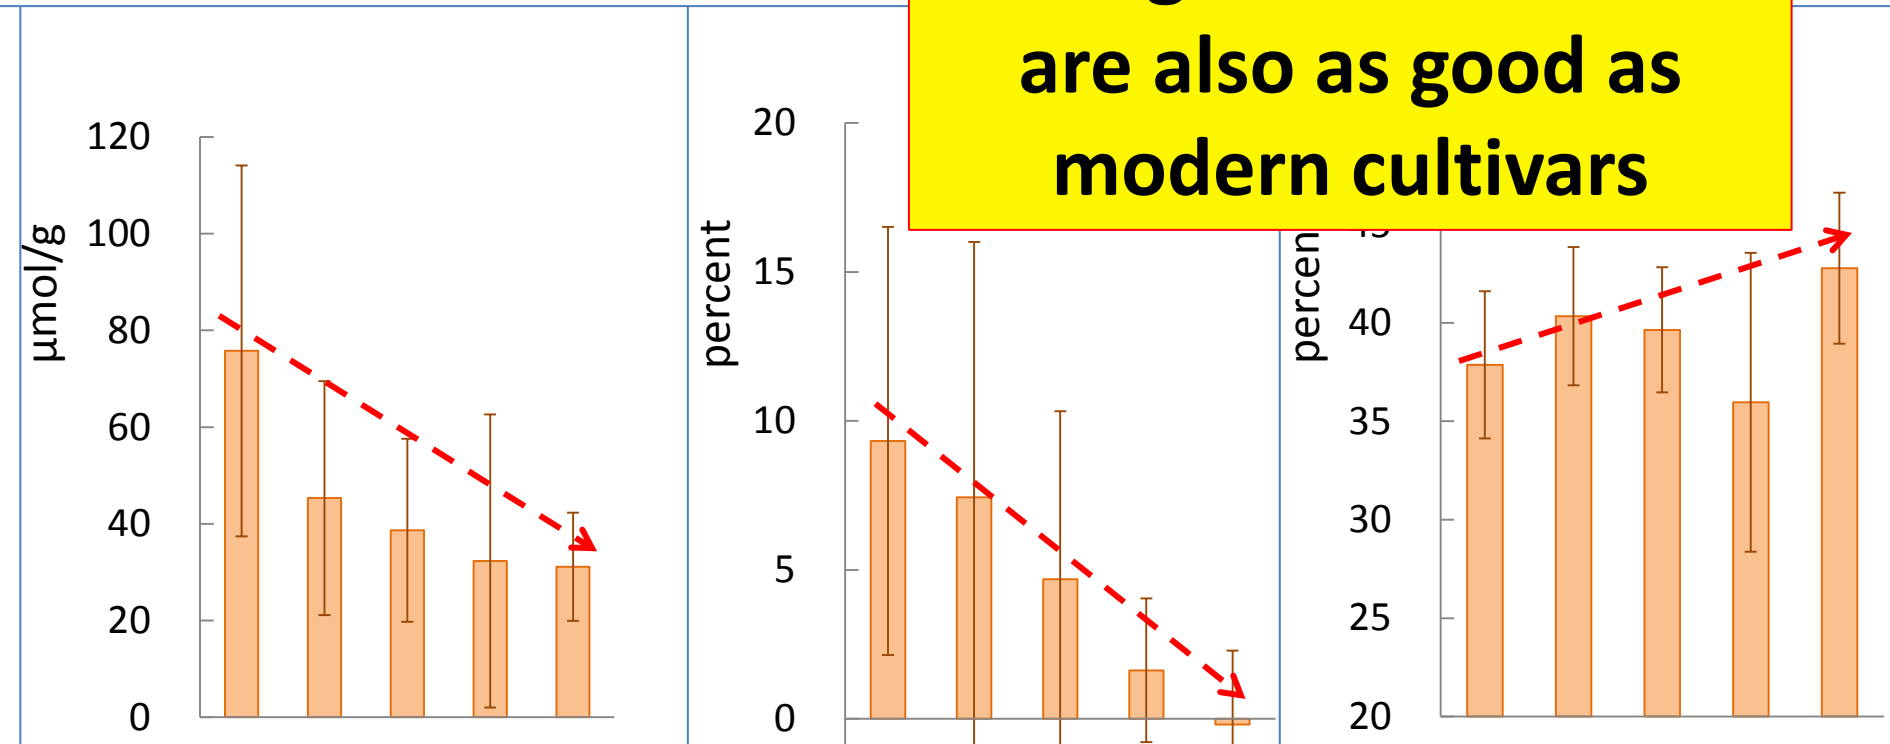

Traits in the population have been greatly improved by recurrent selection

The agronomical traits are also as good as modern cultivars

Traits in the population have been greatly improved by recurrent selection

The agronomical traits
are also as good as
modern cultivars

Bring A^r/C^c subgenomes
in *B. napus*

Shift-out the dross by
recurrent selection

去粗取精

In and out:

Bring A/C subgenomes from all of Brassica oilseed crops **in one**

Shift-**out** the dross by recurrent selection

去粗取精
